Run a successful **Fleet**
Business and make more money!

Introducing Logistrics Fleet

Logistrics Fleet is a low recurring cost tracking application that that can allow you to run a successful Fleet Business and save costs! The solution uses an Android smartphone mounted in the vehicle to provide business critical vehicle information to fleet operators. There is no hardware installation involved and all you need is web access to run the dispatch application. The backend is a rugged tracking application that uses a MySQL database on top of an Ubuntu Linux Operating System and uses Google Maps for locating vehicles. The solution is user friendly and supports a host of business friendly features.

Proven Solutions

Our solutions have been in use for a number of years and our Fleet tracking solution is based on the same reliable technology that has supported millions of trips, GPS information and messages.

Works Anytime. Anywhere.

The application can be used by Fleet providers worldwide. All you need is a tracking unit in each vehicle and a computer connected to the internet for the dispatcher. Works Any place. Any time.

Get Set up & Started in Minutes

The entire set up process is simple and intuitive. If you need assistance we would be happy to answer any questions that you may have and guide you through the set up process. You are up and running in minutes! The Android application needs to be downloaded to the smartphone to get started.

Your Business. Your Way.

We work to keep things simple. We can work with you to help integrate with your existing systems. So you can run your business, your way!

All you need in a **Fleet Tracking** Solution

Real-time Tracking
Your Dispatcher or Administrator can track all the logged in vehicles in real-time on Google Maps by logging into the web application by using a computer with web **access.** No phoning vehicles, no room for arguments and business efficiency is greatly enhanced. You can pull up vehicle information by clicking on the icon associated with vehicle.

Easy Web Set up
The setup is easy and intuitive. Companies, Vehicles etc., can be easily added.

Easy Device Set up and Installation
The Device set up & installation is simple. Simply download the Logistrics Fleet application from the Android Market & mount the phone on your vehicle dash using the mounting unit and you are up & running.

Active Speed Monitoring & Odometer Update
The solution monitors vehicle speeds in real-time and provides that information on the map screen as well as in the reports. The Odometer readings are updated in real-time.

Geo-Fencing*
The software supports custom geo-fence set up and monitoring so you can view alerts about vehicles that cross the fence.

History
You can track vehicle movement in a pre-defined timeline up to two weeks in the past via the Time Trace functionality.

Reporting
One can easily see a summary of total distances travelled by each vehicle or go to individual GPS logs. The reports for individual vehicles also provide current speeds and odometer readings.

Custom data*
Additional Custom data such as defined stop/starts, run time, etc. can also be provided

Latest Hardware
All Android smartphones introduced recently runs on the Android Operating System and comes with built in Assisted GPS.

24/7 Support
The solution is supported 24/7.

*Custom features require custom development. Additional charges may apply.
